2. Management of the various types of degradable and non-degradable waste

Solid waste management

Pollution from waste is aesthetically unpleasing and results in large amounts of litter in our communities which can cause health problems. Solid waste can be categorized into three types: biodegradable, non-biodegradable and hazardous waste. Bio-degradable wastes include food wastes, canteen waste, wastes from toilets etc. Non-biodegradable wastes include plastic, tins and glass bottles etc. Hazardous waste is waste that is likely to be a threat to health or the environment like cleaning chemicals, acids and laboratory chemicals.

Each and every department of CCET as well as administrative offices create some waste and dumped in small waste bin located in the department. Each building several dust bins are placed from where housekeeping staffs take the wastes. From the small bin wastes are dumped in big bin by the housekeeping staffs regularly. From the big waste bins the Municipal Corporation took the solid wastes. Bio-degradable wastes are effectively converted to fertilizer by composting technology inside the university campus. A **vermicomposting** unit required some biodegradable waste to convert these as fertilizer. After segregation of biodegradable waste from canteens, and Hostel are collected and dumped in the composting unit in the campus.

Institute produces lot of paper waste. Paper wastes from Academic Blocks, Library, Administrative offices, Hostels are disposed through vendors. The wastes are properly stacked in designated place and later disposed through vendors for proper waste management.

CHRISTIAN COLLEGE OF ENGINEERING AND TECHNOLOGY

(Approved by AICTE, New Delhi and Affiliated to Anna University, Chennai.)

Liquid waste management:

Liquid waste is generated from Science laboratories, Hostels, and canteen. Liquid wastes generated by the Institute are of two types:

1. Sewage waste.
2. Laboratory, residential washing and canteen effluent.

The liquid wastes are mainly drained to improve the ground level of water.

E-waste management

CCET has very efficient mechanism to dispose E wastes generated from various sources. E-wastes are generated from computer laboratories, electronic labs, Physics Labs, Chemistry Lab, Academic and Administrative Offices.

The e-waste includes out of order equipment's or obsolete items like lab instruments, circuits, desktops, laptops and accessories, printer, charging and network cables, Wi-fi devices, cartridges, sound systems, display units, UPS etc. All these wastes are put to optimal use. All such equipment's which cannot be reused or recycled is being disposed off through authorized vendors. Instead of a new procurement Buy-Back option is preferred for technology up gradation

Hazardous Waste Management

CCET, like other entities that generate and manage hazardous wastes, is faced with a range of problems. Most of the departments do not generate hazardous waste and can be classified as conditionally exempt small quantity generators (generators of less than 100 grams of hazardous waste per month). All stakeholders, especially from Academic Departments and laboratories are responsible for disseminating information on hazardous materials being used in the facility. As the amount of hazardous waste is nil or very negligible amount, there is not facility developed to transport and manage it in proper place.

WASTE MANAGEMENT

- The Bore well located in Girls Hostel (East side)
- It was constructed in the year of 2000-2001
- The Depth of the Bore well 450 feet.
- The cost of Bore well Rs 70,000/-
- It used for the Institution purpose.

As a part of water conservation facilities that are available in the Institution, the Bore well facilities are available in the campus. Institution makes use of Bore well to meet its water requirements. The water from the catchment areas is collected in large and deep well in the campus which is used for Gardening, Irrigation and also used occasionally for construction works. The harvested water is used as longer-term storage as ground water recharge.

- The overhead tank located in the **Main Block**.
- It was constructed in the year of 2000.
- The cost of construction Rs 1,00,000/-
- The capacity of the tank 22,000 liters.

As the water crisis continues to become severe, there is a dire need of reform in water management system and revival of traditional systems. As a part of revival to traditional wisdom, in this Institute we built 6 Nos of overhead tank for drinking purpose after the RO process. In this Institute we built 1 no of Bunds to collect and storage the rainwater for reuse on-site, rather than allowing its run off.

CHECKING RO PLANT BY FOOD & SAFETY OFFICER

The ground water is pumped into storage tanks located at different places in the campus. There are **6 numbers** of overhead storage tanks and one Elevated Service Reservoir in the campus. The water is distributed through well laid pipe network. Drinking water after treating in RO plant is supplied through a separate set of distribution pipes and water for all other purpose is supplied through another set of distribution pipes.

Entire distribution system is well supervised by Civil works committee to ensure that there are no leakages and wastages of precious water through joints, valves etc. Waste usage of water is reduced using low pressure flushes. All the stakeholders of the college are well educated to use water economically and efficiently.
